

# Side Experiment

11/06/2018

# Design

- Respond with side:
  - The memory set is presented on one side of the screen (left vs. right)
  - If test probe is a member of memory set (old), subjects respond with key(left vs. right) consistent with the memory set. Otherwise, subjects respond with the other key (for new probes)
- CM, VM and Mixed
  - CM: one group of items assigned to the left key and the other assigned to the right key regardless of the side of the memory set.
  - VM: the key assignment change from trial to trial
  - Mixed: CM and VM item mixed within trial
- Set size: 2,4,8
- ~90 subjects in total, 30 in each condition, over 200 trials training
